Overview Consulting Projects

2025 Q2 - 2025 Q4 **Sjöviksverket sewage facility**
Role: Engineer

Facility with complicated changeover procedures. Proud over facility design report and resulting design changes in sludge and gas handling.
New sludge handling building, pumpstation and gas system.

Overview Consulting Projects

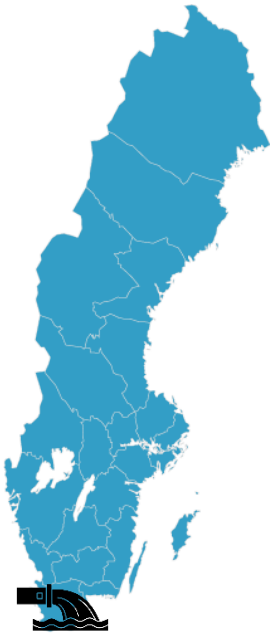

2023 Q3 - 2024 Q4 **Gräfsåsen sewage facility**
Role: Engineer & 3D Coordinator

3D coordination and planning for tanks and calculation of gas production. Tricky tanks and calculations of gas production with tight deadlines for engineering.

Overview Consulting Projects

2023 Q1 - 2024 Q1 **Degeberga sewage facility**
Role: Responsible Engineer

Facility design with new building for dewatering equipment.

Overview Consulting Projects

2022 Q1 - 2023 Q2 **Örnsköldsvik facility**
Role: Engineer

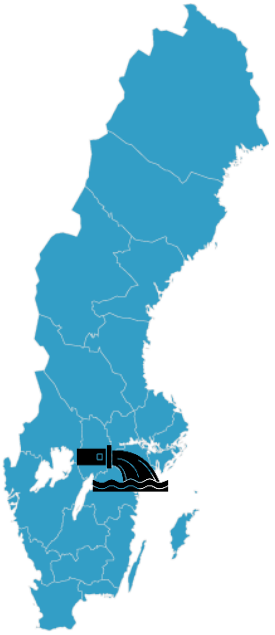

Assisted with the engineering of a new sewage facility in Örnsköldsvik. Tricky steam system and platform next to the building connecting to tanks. Tricky plastic pipelines.

Overview Consulting Projects

2022 Q1 - 2022 Q2 **Malmköping ARV**
Role: 3D Coordinator & engineer

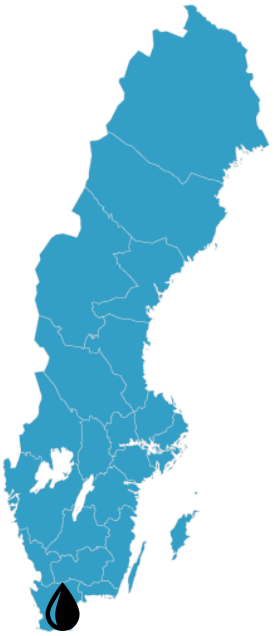

Malmköping ARV is an updated sewage facility in Malmköping. Similar team as Rosenholms rötkammare, but much smaller facility. Continued 3D coordination with similar structure as Rosenholms rötkammare.

Overview Consulting Projects

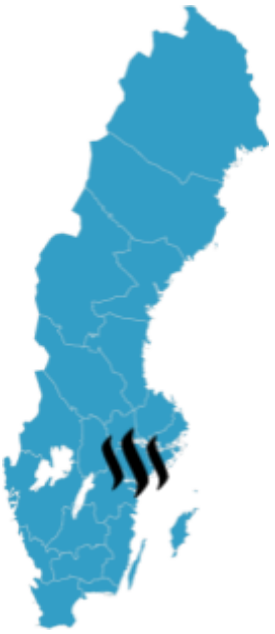

2022 Q1 - 2022 Q2 **Water facility**
Role: Responsible engineer

Designed a water facility in southern Sweden and assisted in delivering a preparatory study.

Overview Consulting Projects

2021 Q4 - 2022 Q1 **Rosenholms rötkammare**
100-200 MSEK **Role: 3D Coordinator**

Rosenholms rötkammare is an updated biogas facility in Katrineholm. The new facility is meant to extract biogas from sludge, septic and cake waste.

To find a layout that worked with gas facility building rules was a big challenge. There were differences in height over the area and an existing road that would be in the way. The solution was to add more soil to level the area at a better height and to be able to keep the existing road placement.

The new sludge management building was also a big challenge. The new building was to be a two story building where an old concrete sedimentation construction should serve as the lower level. I had to recreate the existing construction and then derive the new building from the existing construction. It was difficult to get the best use of existing walls, fit where to place reception of waste and fit large equipment into existing parts of the old construction.
